

ABSTRACT:

An improved structure of the rimless eyeglasses includes a pair of lenses each having a pair of connection pieces respectively stuck on the outer and inner edges. The 5 connection pieces each has a sticky surface toward the lenses and pair of protrudent screw hole spacedly formed on outer surface. A bridge having a pair coupling plates at two end engaged with the protrudent screw holes of the connection pieces and secured by screws. A pair of L-shaped temples 10 each has a coupling plate on the end of its transverse portion and engaged with the connection pieces on outer edge of the lenses and secured by screws. The character is that the connection pieces are removable and for adjusting the focus and the horizontal line of the eyeglasses in order to fit the 15 eyes and the face of a wearer and saves the cost to buy a new one.
